

JS Signature Installation Instructions

Please follow the instructions below to install or modify the files that are listed. To prevent confusion, separate detailed instructions are provided for different major versions of Studio.

Studio 6.0.x

- **html/scripts/ctl_signature.js:** This contains the JS Signature client javascript. Copy this file to your Omnis javascript script folder.
- **studio600/html/6.0.2_patch_scripts:** This folder contains an updated set of Omnis 6.0.2 scripts. Studio 6.0.2 developers **MUST** replace the existing scripts in the Omnis/Web server's "html/scripts" folder with those contained in this folder. If you do not, some of the API calls used by the signature control may not work.
- **studio600/html/jsctempl.htm:** This file is used by Omnis to auto generate HTML files for testing your remote forms. We have modified this file to load the additional scripts required by your forms if your form uses the JS Signature control. You may replace your existing template file with this one, or merge the appropriate changes.

The following files are the Macintosh and Windows external DLLs that are required by your Omnis developer installation and your Omnis server installations. Copy this file to your Omnis **jscomp** folder.

- **studio600/mac/jscomp/jsSignatureBD.u_webdesign**
- **studio600/win/jscomp/jsSignatureBD.dll**

The following files are the Macintosh and Windows PDFDevice component which are only required to run the JS Signature example. They are not required to use JS Signature in your own implementation. PDFDevice is a separate product which can be purchased in addition to the JS Signature. PDFDevice is faster and produces smaller PDF documents compared to other solutions such as Omnis PDF.

- **studio600/mac/xcomp/pdfdevice.u_xcomp**
- **studio600/win/xcomp/pdfdevice.dll**

Studio 6.1.x

- **html/scripts/ctl_signature.js**: This contains the JS Signature client javascript. Copy this file to your Omnis javascript script folder.
- **studio610/html/jsctempl.htm**: This file is used by Omnis to auto generate HTML files for testing your remote forms. We have modified this file to load the additional scripts required by your forms if your form uses the JS Signature control. You may replace your existing template file with this one, or merge the appropriate changes.

The following files are the Macintosh and Windows external DLLs that are required by your Omnis developer installation and your Omnis server installations. Copy this file to your Omnis **jscomp** folder. On windows please make sure you copy files for the correct architecture, i.e. win32 or win64.

- **studio610/mac/jscomp/jsSignatureBD.u_webdesign**
- **studio610/win32/jscomp/jsSignatureBD.dll** or
studio610/win64/jscomp/jsSignatureBD.dll

The following files are the Macintosh and Windows PDFDevice component which are only required to run the JS Signature example. They are not required to use JS Signature in your own implementation. PDFDevice is a separate product which can be purchased in addition to the JS Signature. PDFDevice is faster and produces smaller PDF documents compared to other solutions such as Omnis PDF. On windows please make sure you copy files for the correct architecture, i.e. win32 or win64.

- **studio610/mac/xcomp/pdfdevice.u_xcomp**
- **studio610/win32/xcomp/pdfdevice.dll** or
studio610/win64/xcomp/pdfdevice.dll
