

OGantt Enhancements

ID : 1823**Implemented in version :** 4.1.2.0**Short Description:** GANTT report - custom weekstart**Full Description:** Is it possible to set the weekstart day in a report object?

I've seen from the docs that there the \$gsetscale method for the window object, but i've found nothing for the report.

If this isn't possible, can you please add a property to customize the weekstart also for the report.

AttachedFile: gantt-week-start.png

Comments : We have added a new property called \$gweekstart for the printing control. The property can be assigned using the kGantt... weekday constants.

Example:

Calculate refGanttPrint.\$gweekstart as kGanttMonday
