Release Notes OSpell2 version 3.3.0.0

OSpell2 Expelled Gremlins

ID :	1844	**Fixed in version :**	3.2.5.1

Short Description: OSpell can't write into dictionary file

Full Description: When i run your "OWriteDocumentManager" library (as in our software, now i succeed to begin to integrate OSpell) i obtain many errors each time OSpell is called in order to write into a user dictionnary file (cf. pictures into the zip file).

I've a the same problem on Win 10 and macOS 10.14 with Omnis Studio 10.1

$addword or $writeuserlex don't work with disk based editable dictionaries.

AttachedFile: Writing dictionnary file.zip

Comments : This issue was caused by a standard-c function for generating temporary file names which appear to cause problems related to permissions in some winOS and macOS versions.

OSpell2 Enhancements

ID : 1852 **Implemented in version :** 3.3.0.0

Short Description: Studio 10.2 Port

Full Description:

Comments : The studio 10.2 port required some additional changes besides rebuilding the component with a new SDK. Therefore, extra care must be taken when upgrading to this version, i.e. all features that are in use in your library should be tested.

Supported Platforms and Studio versions:
   macOS: Studio 8.1.7.2 through to 10.2
   winOS: Studio 4.3 through 10.2
